

# Wallpaper

As an industry leader in window film and associated products, The Window Film Company UK Ltd prides itself in using the newest and most innovative products on the market. One of the most popular innovations is **digital wallpaper**.

This product has a unique surface, allowing it to be printed by the majority of printer types. The Window Film Company UK Ltd use both solvent and UV based printing techniques to recreate patterns, images and designs in eye-catching quality.

Digital wallpaper offers a hugely versatile decoration solution, with no limit or restriction on what can be printed. High resolution photographs, bespoke designs or corporate branding can all be used to create a stunning finish.

The installation process is far easier than traditional wallpaper, the paste free application making it suitable for use on most internal surfaces.

Our in-house graphics team can create a design for you, or simply recreate an existing image or design before using wide format printers to print the paper in the sizes you require.

Digital wallpaper is supplied with a matt finish, but if your requirements are for a more glossy appearance, this can be achieved by applying a laminate, which also serves to protect the product - especially useful if the wallpaper is to be applied in busy areas.

This unique twist on a traditional decorating method provides an opportunity to bring your designs and ideas to life - the only limit is your imagination.
